

SUBSCRIPTION

The **igrpweb** subscription gives you access to:
Username and password (Administrator Profile).
Access to sysadmin that serves as the main account for assigning users and managing access in different environments.

Virtual Data Center. VDC with 3 environments (production, development and test/staging) pre-defined with vCPU, memory and storage. The VDC available, is configured with 4 vCPU, and 8 GB of RAM for each environment. The total storage is 175GB with 25GB being assigned to the production environment, 75GB each assigned to the development and test/staging environments

Helpdesk Green Line. +238. 260.7925/26

Client Dashboard. It is a module of the cloud infrastructure, which allows the administrator to create, manage and monitor the resources associated with a certain VDC.

CREATE AND RUN
E-GOVERNMENT APPLICATIONS

01 ACCESS

igrpweb is provided securely on the Internet, eliminating the need for the client to build and maintain its own data center or server room, to host the application.

The user will be given access a portal, which points to a terminal, which gives automatic access to a VDC with 3 environments (Production, Development and Testing / Staging).

02 INTEGRATION

All applications developed in **igrpweb** can be configured to allow them to communicate with each other.

igrpweb also allows you to integrate applications created on another platform, while sharing an access session between them, and guaranteeing SSO.

03 SUPPORT and CONSULTING

We have a team of certified experts and a set of innovative offerings in each of the areas necessary for creating and running electronic government solutions that, when combined with our cloud solutions, accelerate the implementation process. Our experience in developing e-Government solutions and infrastructures allows us to collaborate with our customers in making the most of igrpweb.

Our consulting services in the areas of database, design, programming, analysis, training, and infrastructure is offered at a cost of USD \$ 330 per day (doesn't include travel and accommodation).

www.store.nosi.cv

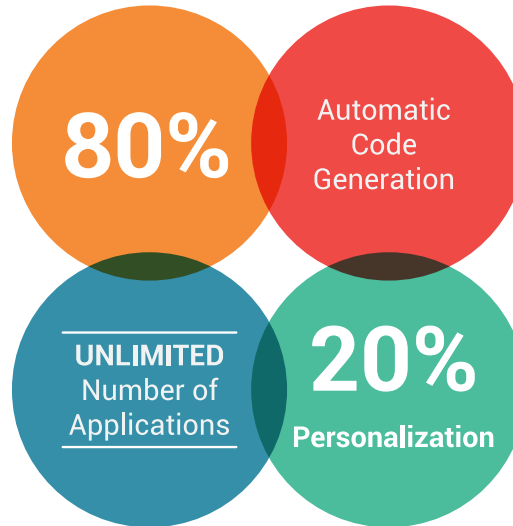

A tool for creating e-governance applications based on business processes and steps, automatic code generation and the incorporation of Once-Only-Principle (OOP).

- A single public service portal in any governance domain, aligned with the One-Stop-Shop (OSS) principle.
- A unique and robust technology platform that enables simple and secure, integrated and sustainable applications to be created and run electronically.

LOW COST, SAFE, ALWAYS AVAILABLE

Drag and Drop Application Development

With a low-cost and pay-as-you-grow model, the customer pays an affordable USD \$ 9,000 per year to use the platform with all 3 environments, including a sysadmin user (administrator).

Using the sysadmin account, the customer can add users as needed, and each user on the platform pays USD \$ 5 / month.

The customer can also test the platform with a 30-day free trial before buying the service.

FUNCTIONALITIES

igrpweb Studio

Environment for software development

Native Features

Access and Permissions | Login and Authentication | Search | Audit

Database Migration

Functionality of migrating data from one database to another.

Help/Documentation

Documentation about igrpweb and help in its use.

Client Dashboard

Module of the cloud infrastructure, which allows the sysadmin to create, manage and monitor the resources associated with a particular VDC.

OAuth 2.0

Allows Single-Sign-On (SSO) authentication between applications.

Application management

Core management modules such as access control, menu, users, domain, and page sharing between applications.
